**Listing of Claims**

1. (Currently amended) A computer implemented method of identifying web sites, comprising:

identifying at least one functional characteristic of a web site to be tested, the at least one functional characteristic corresponding to at least one function that may be performed by the web site or supported by the web site;

retrieving content for a the web site;

testing the content of the web site for a presence of the at least one functional characteristic; and

storing results of the testing of the content of the web site.

2. (Previously presented) The computer implemented method of claim 1, wherein the at least one functional characteristic identifies a functional characteristic of web sites that requires a function to be enabled by a client device in order to output the web site content on the client device.

3. (Currently amended) The computer implemented method of claim 1, further comprising:

disabling, in a web browser, ~~the~~ at least one functional characteristic prior to retrieving the content for the web site.

4. (Currently amended) The computer implemented method of claim 3, wherein testing the content of the web site for the presence of the at least one functional characteristic comprises determining if a portion of the content is not output ~~by~~ to the web browser due to the at least one functional characteristic in the web browser being disabled.

5. (Previously presented) The computer implemented method of claim 1, wherein storing the results of the testing comprises generating an entry in a web site functional characteristics database based on the results of the testing.
6. (Previously presented) The computer implemented method of claim 1, wherein the at least one functional characteristic comprises at least one of use of active scripting, a type of active scripting used, a plug-in application used, use of forms, storing of cookies on a client device, providing dynamic web page content, providing dynamic user interfaces, displaying digital movies, and broadcasting audio data.
7. (Previously presented) The computer implemented method of claim 1, wherein retrieving content for the web site comprises generating a list of web sites to be tested, and selecting a next web site in the list of web sites to be tested.
8. (Previously presented) The computer implemented method of claim 7, wherein identifying at least one functional characteristic to be tested comprises generating a list of functional characteristics to be tested, and selecting a next functional characteristic in the list of functional characteristics to be tested.
9. (Currently amended) The computer implemented method of claim 8, wherein testing the content of the web site for the presence of the at least one functional characteristic comprises for each web site in the list of web site sites, testing each functional characteristic in the list of functional characteristics.
10. (Previously presented) The computer implemented method of claim 5, further comprising:
  - receiving a search request including a designation of one or more web site functional characteristics;
  - searching the web site functional characteristics database based on the search request; and

returning results of searching the web site functional characteristics database to thereby identify zero or more web sites having or not having the designated one or more web site functional characteristics.

11. (Currently amended) A computer program product comprising:  
a computer usable medium having computer usable program code for identifying web sites, said computer program product including:  
computer usable program code for identifying at least one functional characteristic of a web site to be tested, the at least one functional characteristic corresponding to at least one function that may be performed by the web site or supported by the web site;  
computer usable program code for retrieving content for ~~a~~ the web site;  
computer usable program code for testing the content of the web site for a presence of the at least one functional characteristic; and  
computer usable program code for storing results of the testing of the content of the web site.
12. (Original) The computer program product of claim 11, wherein the at least one functional characteristic identifies a functional characteristic of web sites that requires a function to be enabled by a client device in order to output the web site content on the client device.
13. (Currently amended) The computer program product of claim 11, further comprising:  
computer usable program code for disabling, in a web browser, ~~the~~ at least one functional characteristic prior to retrieving the content for the web site.
14. (Currently amended) The computer program product of claim 13, wherein the computer usable program code for testing the content of the web site for the presence of the at least one functional characteristic comprises computer usable program code for

determining if a portion of the content is not output ~~by~~ to the web browser due to the at least one functional characteristic of the web browser being disabled.

15. (Previously presented) The computer program product of claim 11, wherein the computer usable program code for storing the results of the testing comprises computer usable program code for generating an entry in a web site functional characteristics database based on the results of the testing.

16. (Previously presented) The computer program product of claim 11, wherein the at least one functional characteristic comprises at least one of use of active scripting, a type of active scripting used, a plug-in application used, use of forms, storing of cookies on a client device, providing dynamic web page content, providing dynamic user interfaces, displaying digital movies, and broadcasting audio data.

17. (Previously presented) The computer program product of claim 11, wherein the computer usable program code for retrieving content for the web site comprises computer usable program code for generating a list of web sites to be tested, and computer usable program code for selecting a next web site in the list of web sites to be tested.

18. (Previously presented) The computer program product of claim 17, wherein the computer usable program code for identifying at least one functional characteristic to be tested comprises computer usable program code for generating a list of functional characteristics to be tested, and computer usable program code for selecting a next functional characteristic in the list of functional characteristics to be tested.

19. (Previously presented) The computer program product of claim 18, wherein the computer usable program code for testing the content of the web site for the presence of the at least one functional characteristic comprises computer usable program code for testing each functional characteristic in the list of functional characteristics for each web site in the list of web sites.

20. (Previously presented) The computer program product of claim 15, further comprising:

computer usable program code for receiving a search request including a designation of one or more web site functional characteristics;

computer usable program code for searching the web site functional characteristics database based on the search request; and

computer usable program code for returning results of searching the web site functional characteristics database to thereby identify zero or more web sites having or not having the designated one or more web site functional characteristics.

21. (Currently amended) An apparatus for identifying web sites, comprising:

a network interface;

a database interface; and

a web site content analysis engine coupled to the network interface and the database interface, wherein the web site content analysis engine identifies at least one functional characteristic of a web site to be tested, the at least one functional characteristic corresponding to at least one function that may be performed by the web site or supported by the web site, retrieves content for a the web site via the network interface, tests the content of the web site for a presence of the at least one functional characteristic, and stores results of the testing of the content of the web site via the database interface.

22. (Original) The apparatus of claim 21, wherein the at least one functional characteristic identifies a functional characteristic of web sites that requires a function to be enabled by a client device in order to output the web site content on the client device.

23. (Currently amended) The apparatus of claim 21, wherein the web site content analysis engine disables, in a web browser, ~~the~~ at least one functional characteristic prior to retrieving the content for the web site.

24. (Currently amended) The apparatus of claim 23, wherein the web site content analysis engine tests the content of the web site for the presence of the at least one functional characteristic by determining if a portion of the content is not output ~~by~~ to the web browser due to the at least one functional characteristic of the web browser being disabled.

25. (Original) The apparatus of claim 21, wherein the web site content analysis engine stores the results of the testing by generating an entry in a web site functional characteristics database based on the results of the testing.

26. (Previously presented) The apparatus of claim 21, wherein the at least one functional characteristic comprises at least one of use of active scripting, a type of active scripting used, a plug-in application used, use of forms, storing of cookies on a client device, providing dynamic web page content, providing dynamic user interfaces, displaying digital movies, and broadcasting audio data.

27. (Original) The apparatus of claim 21, wherein the web site content analysis engine retrieves content for the web site by generating a list of web sites to be tested, and selecting a next web site in the list of web sites to be tested.

28. (Original) The apparatus of claim 27, wherein the web site content analysis engine identifies at least one functional characteristic to be tested by generating a list of functional characteristics to be tested, and selecting a next functional characteristic in the list of functional characteristics to be tested.

29. (Original) The apparatus of claim 28, wherein the web site content analysis engine tests the content of the web site for the presence of the at least one functional characteristic by, for each web site in the list of web site, testing each functional characteristic in the list of functional characteristics.

30. (Previously presented) The apparatus of claim 25, further comprising:  
a search engine coupled to a search request input interface generation device and a search results interface generation device, wherein the search engine receives a search request including a designation of one or more web site functional characteristics, searches the web site functional characteristics database based on the search request, and returns results of searching the web site functional characteristics database to thereby identify zero or more web sites having or not having the designated one or more web site functional characteristics.

31. (Previously presented) A computer implemented method of identifying web sites, comprising:

receiving a search request including a designation of one or more web site functional characteristics;

searching a web site functional characteristics database based on the search request; and

returning results of searching the web site functional characteristics database to thereby identify zero or more web sites having or not having the designated one or more web site functional characteristics.

32. (Previously presented) The computer implemented method of claim 31, wherein the one or more web site functional characteristics identify functions that are enabled on a client device web browser in order to output the web site content on the client device.

33. (Previously presented) The computer implemented method of claim 31, further comprising:

charging a fee to an account of a source of the search request for searching the web site functional characteristics database based on the search request.

34. (Previously presented) The computer implemented method of claim 31, wherein the one or more web site functional characteristics comprises at least one of use of active scripting, a type of active scripting used, a plug-in application used, use of forms, storing of cookies on a client device, providing dynamic web page content, providing dynamic user interfaces, displaying digital movies, and broadcasting audio data.

35. (Currently amended) A data structure having entries corresponding to web sites for use by a computing device to identify web sites based on functional characteristics, each entry comprising:

a web site identifier field for identifying a web site; and  
one or more functional characteristic fields for identifying one or more functional characteristics of the web site corresponding to one or more functions that may be performed by the web site or supported by the web site and identified in the web site identifier field.

36. (Original) The data structure of claim 35, wherein the functional characteristics identify functions that are enabled on a client device web browser in order to output the web site content on the client device.

37. (Previously presented) The data structure of claim 35, wherein the functional characteristics comprise at least one of use of active scripting, a type of active scripting used, a plug-in application used, use of forms, storing of cookies on a client device, providing dynamic web page content, providing dynamic user interfaces, displaying digital movies, and broadcasting audio data.

38. (Previously presented) The data structure of claim 35, wherein the data structure is stored on a computer usable medium.

39. (Previously presented) The data structure of claim 38, wherein the computer usable medium is part of a network attached storage unit.

40. (Previously presented) The computer implemented method of claim 1, wherein the results of the testing of the content of the web site are stored in a network attached storage unit.

41. (Previously presented) The computer program product of claim 11, wherein the computer usable program code for storing the results of the testing of the content of the web site comprises computer usable program code for storing the results of the testing in a network attached storage unit.

42. (Original) The apparatus of claim 21, wherein the web site content analysis engine stores the results of the testing of the web site in a database stored on a network attached storage unit.
